Education

August 2024 - May 2028

B.Tech in CSE with specialisation in AI & DS

LNM Institute of Information Technology

CGPA : 8.22 (till 4th sem)

Skills

Languages :

C/ C++ Python

Frontend :

HTML CSS JavaScript React

Backend :

FastAPI Authentication API Design

Generative AI:

LangChain LangGraph Hugging Face AWS Bedrock Vertex AI Gemini

Cloud & Deployment:

AWS Google Cloud Platform (GCP)

Databases:

SQL MongoDB

Tools:

Git GitHub Docker Postman

Core CS :

OOPS (Java) DBMS Operating Systems Computer Networks DSA (C)

Experience

1. Teaching Assistant in Data Structures and Algorithms Jan 2026 - May 2026

- **Mentored 100+ undergraduate students** across 10 intensive, 3-hour practical laboratory sessions, clarifying core DSA concepts and algorithmic logic.
- Assisted students in debugging and optimizing algorithmic solutions.
- Strengthened communication and analytical skills while mentoring students

2. Freelance Web Developer - Hospital Website June 2026 - present

- Developing and deploying a responsive website for a healthcare client to improve access to hospital services, departments, and patient information.
- Collaborating directly with stakeholders to gather requirements and iteratively implement features based on user feedback.

- Building scalable web features to streamline patient communication and enhance accessibility to healthcare services.

Projects

MediaMitra - AI-Powered Content Creation Platform

- **Designed and deployed** an AI-powered content creation platform integrating multiple LLM services, with the frontend hosted on **AWS Amplify**.
- Developed a **serverless backend architecture** using **AWS Lambda**, **API Gateway**, and **Amazon Cognito** for authentication and scalable request processing.
- Integrated **LangChain**, **Hugging Face**, **Groq API**, and **AWS Bedrock** to generate personalized content and automate AI workflows.
- Integrated the **YouTube Data API** to analyze engagement metrics and sentiment for content performance.

MannSahay - Mental Wellness Platform

Google GenAI Exchange Hackathon | Top 10 Finalist

- Developed and deployed the **FastAPI** backend on **Google Cloud Run** using **Docker**, enabling scalable and containerized deployment of AI services.
- Integrated **Vertex AI Gemini API** with **Speech-to-Text** and **Text-to-Speech** services to deliver multilingual, voice-enabled conversational support.
- Designed AI orchestration workflows using **LangChain** and **LangGraph**, connecting the React frontend with Google Cloud AI services.
- Selected among the **Top 10 teams** in the **Google GenAI Exchange Hackathon**.

ShopAssist – Customer Support Assistant

- Developed an **AI-powered e-commerce assistant** for handling product, refund, and order-related queries.
- Built a custom database schema and workflow for **real-time order tracking** and personalized recommendations based on purchase history.
- Designed backend logic to automate responses for frequently asked customer support requests.

Achievements

- **Top 10 Finalist (Problem Statement Category)** for Google Gen AI Exchange Hackathon (MannSahay – AI Mental Wellness Platform)
- Secured **2nd Runner-Up position** at AMD Slingshot Campus Days Jaipur Promptathon (Hospital Triage System)
